### **Bird nest out of waste**

**In collaboration with**

### **Department of Environment, Government of India**

Birds are important members of many ecosystems. They play a vital role in controlling pests, acting as pollinators, and maintaining island ecology. In addition, birds are important to humans in many ways, such as serving as a source of food and providing fertilizer in agricultural settings. We are facing a decline in the number of bird species in India, according to the country's first major report on the state of bird populations. Birds of prey and water birds seem to have been hit particularly hard owing to habitat destruction, hunting and the pet trade. But presently the most critical threat is the destruction and fragmentation of habitat. The loss of forests, plains and other natural systems into agriculture, mines, and urban developments, the draining of swamps and other wetlands, and logging reduce potential habitat for many species. Hope is the thing with feathers that perches in the soul and sings the tune without the words and never stops at all.

With the motto to 'SAVE BIRDS SAVE YOURSELF' Eco Club of Shyam Lal College In Collaboration with Department of Environment, Government of India raise awareness among citizens/youths to draw attention to the decline of Bird species and also made bird nest from different kind of waste and placed them at strategic positions to attract the birds in the College Campus from 16 Nov 2016 to 5 Jan 2017. Almost 10 students participated in this event as an initiative to save and increase the population of birds.
