Organic waste recycling

In Collaboration with

Department of Environment, Government of India

In nature, there is nothing that is a waste and everything gets recycled. The term organic waste translates to any matter that is produced by a plant or an animal and is biodegradable. For instance, dry leaves, flowers or weeds, livestock manure, leftover food, vegetables and fruit peels, egg shells, products made of wood and paper, and many such things which are the by-products of plants or animals. Compost therefore helps to improve soil structure and acts as a natural source of essential nutrients for the soil like nitrogen phosphorus, potassium, carbon, and more. It is a natural and organic process which makes it a cost-efficient activity. Recycling the waste will also reduce the overall pollution of your surroundings and has become part of our culture. Therefore, SLC's Eco-club team in collaboration with Department of Environment, Government of India took initiative and was practically involved in making and learning about manure in college campus and also make understand everyone to promote a responsible and environment friendly way to deal with waste which enhances the soil and plant quality in college gardens. They taught them about the educational opportunities that promote sustainable environmental practices which also raised a pride of college through the positive contribution towards the environment. Around 30 students participated in this awareness drive from 2nd March to 10th March 2017.

SLC (UNIVERSITY OF DELHI)

SHYAM LAL COLLEGE

ECO CLUB (THE_LAST_LEAF)

IN COLLABORATION WITH DEPARTMENT OF ENVIRONMENT

(Government of India)

Organises

**ORGANIC WASTE
RECYCLING**

DATE : 02.3.2017 - 10.3.2017

DR. ARKAJA GOSWAMI

(CONVENOR ECOCLUB)

DR. SUNAINA ZUTSHI

(CO-ORDINATOR ECOCLUB)

PROF. RABI NARAYAN KAR

(PRINCIPAL SLC)
