### **Report on Bird House**

**In Collaboration with**

### **Department of Environment, Government of India**

Nowadays, it has become difficult for birds to find food and shelter for their survival especially in the urban areas, due to lack of nesting grounds and proper food. Eco-club students took another initiative towards helping birds to survive for that they took used products like plastic bottles, waste wooden planks and newspapers to build bird shelters and bird feeders instead of using market products. This step was taken to make students understand how to use waste products found in households and nearby work place into any worthy product which is not only useful for birds but also reduces waste. These bird feeders and shelters were hung on trees, inside college campus where there are a large number of trees and birds are not disturbed by human activities. An initiative is taken by Eco-club of SLC in collaboration with the Department of Environment, Government of India to help the birds by creating bird houses and placing them at different places in campus. 15 students participated in this drive on 2<sup>nd</sup> Oct 2018.
