Earth Hour
In collaboration with
Department of Environment, Government of NCT, Delhi

Earth Hour is one of the world's most significant grassroots movements for the environment organised by WWF, its sole motive is to spread awareness on environmental issues in our global and local communities. Every year individual communities and businesses are encouraged to turn off non-essential electric lights for 1 hour from 8:30 to 9:30 p.m. on a specific day towards the end of March. Surprisingly, many people were aware of this initiative but had never celebrated Earth Hour. So our Eco-Club team with the motive to let people know more about this movement conducted live discussion and various activities through online mode on 26th March 2022 to increase awareness about the energy use, consumption, impact and long-lasting effects on the environment. The theme of the discussion was "Shape our future" in which students also organised quiz, slogan and poster making competition in which 35 participants of different age groups participated. Through a live discussion, they tried to give all the possible information regarding the Earth Hour.
